

Dr. Laura Hungerford, DVM, MPH, PhD, CPH, FNAP

Dr. Hungerford's Ph.D. is in veterinary epidemiology, which she used as a launching point for a career at the intersection of epidemiology, public health, and emerging diseases. She has brought together human medical and public health teams with veterinary public health, beginning much earlier than many to consider how human and animal health are intertwined and how research in each can elevate and move forward efforts in the other. Dr. Hungerford also has made an impact via her leadership and teaching efforts.

She has served on both veterinary and medical student teaching and planning committees, contributing to future generations of professionals their critical public health skills. Her many graduate students have gone on to work for pharmaceutical companies, returned continued their research around the world, taken various roles within the FDA, served as a technical expert at the UN on Risk Assessment, worked in laboratory animal regulation and private veterinary practice, as well as having been appointed to many academic positions.

2021 CRWAD Fellows Inductee
